PROFESSIONAL SUMMARY

Results-driven Computer Science undergraduate (B.Tech 2026) specializing in backend development with Python and Django REST Framework. Experienced in designing scalable REST APIs, relational database engineering (MySQL, SQLite), and data processing pipelines. Proven ability to automate workflows and deliver clean, maintainable code. Seeking a backend or software engineering role where I can take high ownership and contribute to product-focused, fast-paced teams.

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, java
Backend / Frameworks: Django, Django REST Framework (DRF), REST API Design, FastAPI
Frontend: HTML5, CSS3, JavaScript
Databases: MySQL, SQLite, SQL — schema design, indexing, query optimisation
Data & Automation: Pandas, NumPy — data pipelines, preprocessing, feature extraction
Tools & Platforms: Git, GitHub, VS Code, Postman
Core CS: Data Structures & Algorithms, OOP, SDLC, Agile basics

PROFESSIONAL EXPERIENCE

AI/ML Engineering Intern — Edunet Foundation

Feb 2025 – Mar 2025 | Remote

TechSaksham Initiative | Microsoft & AICTE

- Engineered the core candidate screening and ranking engine in Python, processing 500+ candidate profiles per run and cutting manual review time by ~70%.
- Built end-to-end data processing pipelines with Pandas and NumPy to clean, extract, and normalise unstructured text data from varied resume formats.
- Automated screening workflows by designing reusable Python modules, improving evaluation accuracy and reducing recurring effort by ~60%.
- Integrated an SQLite backend to persist and query parsed candidate data, enabling reproducible ranking across multiple job-role configurations.

PROJECTS

Campus Connect — Placement Management System

Python · Django · MySQL · REST API

[Live Demo](#) | [GitHub Repository](#)

- Designed and built a full-stack web application serving 2 user roles (Recruiter/Admin, Student) with role-based access control.
- Architected 15+ REST API endpoints using Django REST Framework with token-based authentication; reduced page load time by 40% through query optimisation and database indexing.
- Engineered relational database schema in MySQL to automate complex recruitment workflows — application tracking, interview scheduling, and offer management — for 500+ student profiles.
- Implemented secure form validation and CSRF protection, ensuring zero critical vulnerabilities during internal security testing.

AI-Powered Resume Screening and Ranking System

Python · SQLite · Pandas · NLP

[GitHub Repository](#)

- Built a Python backend system to rank candidates against job-role requirements, processing 500+ resumes per batch with a configurable scoring algorithm.
- Designed Pandas-based preprocessing pipelines to parse, clean, and extract 10+ features (skills, experience, education) from unstructured PDF/text resumes with 92% extraction accuracy.
- Integrated SQLite database layer to store, retrieve, and compare parsed profiles, enabling multi-job ranking and historical query support across 1,000+ records.
- Modularised the codebase into reusable components (parser, scorer, DB layer) following OOP principles, reducing code duplication by 45%.

EDUCATION

B.Tech — Computer Science and Engineering

Aug 2022 – Jun 2026

Greater Noida Institute of Technology, Greater Noida, UP | **CGPA: 7.25**

10+2 (PCM) — Intermediate

Jawahar Navodaya Vidyalaya, Kanpur Dehat, UP

CERTIFICATIONS & ACHIEVEMENTS

- 5-Star Gold Badge in Python — HackerRank (Top 5% globally in Python problem-solving)
- SQL Fundamentals Certification — HackerRank
- Python with Django Certification — Mysirg.com
- Active competitive programmer — solved 150+ DSA problems across LeetCode and HackerRank
